- Build Service

Timber Garages give you a strong, stable building which is quick to build but can last many years. All garages come in at least 45mm log thickness, with barn doors, two windows and a side door as standard, and can be manufactured to any size.

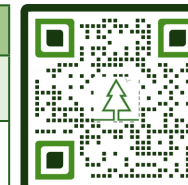

Carports and gazebos are well suited to timber construction, by keeping the cost down but also giving the ideal look for storing any car, a boat, a hot tub or even just creating a nice sitting area.

All garages, carports and gazebos come as flat packed, DIY kits, including all fixtures and fittings as well as being constructed from Scandinavian Spruce.
